- different methods to keep in touch
- online interactive control centre
- robust system of alerts

Safe, simple, secure

Do you or your staff work alone
without a colleague?
Then Trackplot is for you.

Enjoy peace of mind

Complete lone worker monitoring solution

Trackplot is the preferred lone worker solution designed for people who work outdoors. It allows people who work alone to keep in touch wherever they are. This is especially important for people who work in rural and isolated areas.

No need for mobile phone reception

Specifically designed to keep remote lone workers safe, this satellite based system offers a range of different communication methods and does not need mobile phone reception to work.

Trackplot Portal

The Trackplot Portal is the control and command centre at the heart of the Trackplot lone worker monitoring solution. In the Portal you monitor the location, activity and safety of your workforce in real time throughout the day; set up processes and escalation procedures; and reporting. We have applied over 50 years experience in GPS technology, mapping and software development to design this unique online interactive platform.

Robust and reliable

Integral to Trackplot is a system of notifications, a check-in and check-out facility and alerts. The Trackplot Portal has an automatic escalation procedure which, in the event that the lone worker is incapacitated, allows the alarm still to be raised.

Multiple ways to keep in touch

Different methods to check-in and check-out including GPS device, landline, text message, computer, laptop or tablet using the Trackplot Portal or mobile app (available on Android and iPhone). Our mobile app complements the GPS device as it can be used when lone workers have mobile phone reception.

Improved management of lone workers

As a genuine and complete lone worker monitoring system Trackplot can be used to schedule and monitor progress of tasks across your lone worker team, bringing cost, operational and management efficiencies to your business.

Proven technology

Our proven technology, used by major players in forestry, estate management, utilities and local authorities, is robust and reliable, essential if you have lone workers working remotely in harsh, isolated or hazardous conditions. Trackplot's technology and the monitoring process have been carefully thought through based on years of experience.

Comply with the law

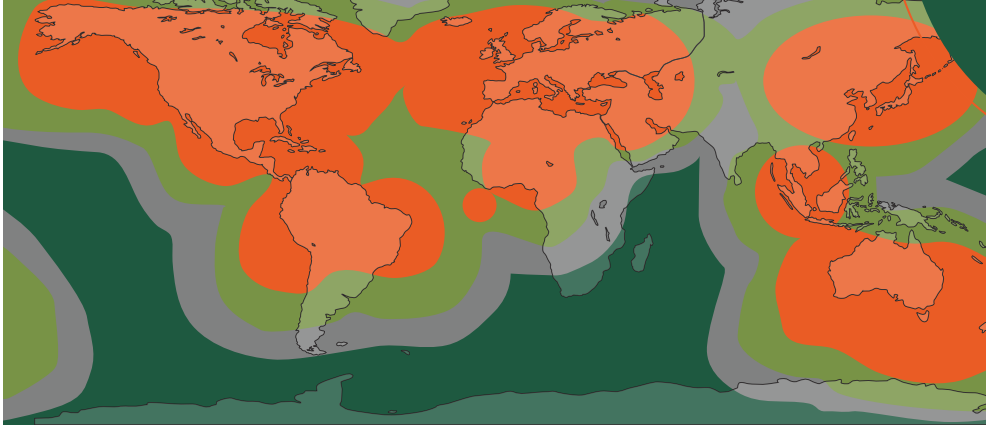

Employers have responsibility for the health, safety and welfare of all of their employees whilst at work. This includes self employed people and contractors who may be affected by work activities. Trackplot will help you to comply with the law, improving working conditions and safety immediately.

Ensuring your lone workers come home safe
and well each day

How it works

The Trackplot Portal is a web-based interactive platform which integrates with the latest GPS devices, mobile phone and satellite communication technology. It uses the Global Positioning System (GPS) and accurate Ordnance Survey mapping to find each lone worker's location. It works across the whole of the UK and beyond including all remote areas.

GPS device global coverage map

Used by major players in forestry, estate management, utilities and local authorities across Britain

- Message within 20 minutes
- 96% to 99% probability of successfully sending a single message within 20 minutes
- Reduced or no coverage available within a 20 minute period
- No coverage in this area

How you use it

The Trackplot Portal keeps authorised managers informed by notifications via email, text messaging and phone. Your lone workers use one of the many methods to check-in at regular intervals and check-out at the end of their working day. Once checked-in, each lone worker is constantly monitored to ensure they are safe. If a lone worker is running late and overdue they can advise they are OK. If a lone worker misses an agreed check-in time then this is escalated, following an agreed procedure, to ensure the lone worker is found as soon as possible.

In an emergency, even in remote regions, a lone worker is able to raise an alert using the GPS device to rapidly locate their position. It does NOT need mobile phone reception to work.

Easy to use

- 24/7 access to the portal
- Scalable to fit the number of lone workers you have
- Email and telephone customer and technical support during office hours
- Preconfigured and ready to go GPS device, so you don't have to worry about setting anything up. We do it for you
- Convenient with many ways to keep in touch

... we make it simple for you.
